- *Official Launch Party event*
- *Open in a new manufacturing facility*
- *Create a non-profit for Scholarships*
- *New look to the website*
- *Preferred customer cards*

***These new prices to start in 2019***

**Information you should know. Just Jameen promotes healthy skin and hair. We do not use petroleum, mineral oils or alcohol in our lotion products. We do not use petroleum in any of our products!**

### Skin Issues

Beautiful skin radiates from moisture. Yet the two most common skin-detrimental ingredients, mineral oil and alcohol, have the opposite effect of moisturizing the skin. Oil encourages the skin to produce even more oil, and alcohol leads to dehydration. This common 'skin-care' combo actually **speeds up the aging process.**

**Made made MINERAL OIL** is the cheapest, most universally-used ingredient in skin care. Made from petroleum, it cannot be absorbed by the body. It "seals" the skin, clogs pores, attracts dirt *and* pulls essential trace minerals from the skin. It must be removed with harsh alcohol. **PETROLATUM**, also called paraffin jelly or petroleum jelly, is also made from petroleum and is very similar to mineral oil.

**ISOPROPYL ALCOHOL** (SD Alcohol) is a harsh and poisonous solvent - that is also derived from petroleum. It is used to dissolve built-up wax and mineral oils on the skin - the ingredients of most skin-care products. It also dissolves the body's own natural moisturizers, leaving skin dry. In fact, it destroys the skin's pH balance.

### Melaleuca Oil

**Scientific Name:** Tea Tree Oil

**Other Names:** Oleum Melaleucae, TTO

**Note:** Taking tea tree oil by mouth may cause possibly serious side effects such as confusion, loss of muscle control, or coma. Even small amounts of tea tree oil may be harmful if swallowed by young children or household pets. Using tea tree oil orally is not recommended due to these risks.

Tea tree oil is applied topically as an anti-infective agent. It has been shown effective for bacterial infections (such as acne), fungal infections (such as athlete's foot), and viral infections (such as cold sores). It contains chemicals known as terpenes, which may damage or kill infectious organisms, while having little or no negative effect on bacteria that normally live on the skin. Because tea tree oil is generally non-irritating, it is also used to relieve mild burns, insect bites, sunburn, and other relatively minor skin conditions.

In dentistry, tea tree oil has been used to kill bacteria in the mouth before dental surgery and to relieve mouth soreness caused by dental procedures. It has also been included in vaginal suppositories to treat vaginal infections. Steam produced when tea tree oil is added to boiling water, nebulizers, or hot baths may be inhaled to relieve nose, throat, and lung irritation. In studies of patients who suffered from oral candidiasis, a fungal infection of the mouth and throat, mouth rinses containing tea tree oil have shown some effectiveness in reducing symptoms. It may also be included in dandruff shampoos.

### Shea Butter

Shea butter has soothing, moisturizing and protecting effects. Due to the presence of a sizeable quantity of unsaponifiable fats, its content in vitamins and other active elements, Shea butter adds other more precise activities to these general properties. It displays a protecting role against UV rays because of its content in cinnamic acid and can thus be incorporated in solar products. The natural latex contained in Shea butter would moreover prevent certain sun allergies. Shea butter also helps cell regeneration and capillary circulation. This favors the healing of small wounds, skin cracks and crevices, and skin ulcers. In the cosmetic field, this property is an asset against skin aging. It has restructuring effects on the epidermis, also on dry and fragile hair. Dry skin, dermatitis, dermatoses, eczema, sun burn, and burns are all helped by natural Shea butter. It has an anti-elastics characteristic which makes it a good active ingredient against stretch marks. Shea butter can also be used to treat rheumatism and aching muscles, and to ease colds because it decongests nasal mucous tissues. It is very well tolerated by the skin for it does not normally trigger any allergic reaction and can even be used on very sensitive skin areas such as mucous tissues and around the eyes.

### Grapeseed Oil

Grapeseed oil has a fine texture and is almost odorless, light in texture and is easily absorbed by the skin and has great emollient properties, making it an ideal skincare and cosmetic ingredient.

A few studies suggest that grapeseed oil raises HDL, the good cholesterol, a claim no other oil makes. Also, it may contain grapeseed antioxidants. So it's probably a healthy choice too.

It has mildly astringent qualities which help to tighten and tone the skin, which makes it useful for acne and other skin complaints. Grape seed contains proanthocyanidins, which are considered to be very potent antioxidants, helpful for diminishing the sun's damaging effects and lessening free-radical damage and also is helpful in wound healing. It is rich in linoleic acid, an essential fatty acid quite important for the skin and the cell membranes. Grapeseed oil is purported to have regenerative and restructuring virtues and has great skin moisturizing properties.

Grapeseed oil contains the following fatty acids: palmitic, palmitoleic, stearic, oleic, linoleic, alpha linolenic, icosanoic, icosenoic and docosanoic.

Grapeseed Oil is a light, odorless natural oil derived from expeller-pressed Italian and French grape seeds. It is an emollient that imparts a rich, silky luster to skin while soothes. Rich in vitamins, minerals and linoleic acid (an essential fatty acid) no skin irritation.
